ABSTRACT

***DEVINA KAMARU**. The Relationship Between Mother's Knowledge and Attitude About Developmental Stimulation with Gross Motor Skills of Children Aged 3-5 Years in the Telaga Biru Health Center Work Area, Gorontalo Regency. Supervised by **ANDI AKIFA SUDIRMAN** as the first Supervisor and **DEWI MODJO** as the second Supervisor.*

Knowledge and Attitude are important factors that influence the development of children's gross motor skills when associated with the provision of optimal stimulation based on the child's age stage. The study aims to determine the relationship between mother's knowledge and attitude about developmental stimulation with gross motor skills of children aged 3-5 years in the Telaga Biru Health Center work area, Gorontalo Regency. The research design used quantitative correlation with cross-sectional techniques. The population was all mothers who had children aged 3-5 years who were in the Telaga Biru Health Center work area. The sample was selected through the stratified random sampling method. Data analysis used the chi square test. The results showed that the majority of mothers had sufficient knowledge of 31 people (41.3%), sufficient attitudes of 32 people (42.7%) and suspect gross motor development of 42 people (56%). Conclusion There is a Relationship between knowledge and attitudes about developmental stimulation with Gross Motor Skills of Children Aged 3-5 Years in the Telaga Biru Health Center Work Area. Suggestion: Parents can be given education related to gross motor development stimulation in children.
