ABSTRACT

Nirma Ningsi A. Amin. *The Relationship Between the Implementation of Nurses' Spirituality Aspects and the Fulfillment of Spiritual Needs Among Inpatients at Dr. Hasri Ainun Habibie Regional General Hospital.* Supervised by Sabirin B. Syukur as the chairman and Nurliah as the member.

The fulfillment of patients' spiritual needs is an integral part of holistic nursing care. However, the implementation of spirituality aspects by nurses is often not optimal, which may affect the quality of fulfilling patients' spiritual needs. This study aimed to analyze the relationship between the implementation of nurses' spirituality aspects and the fulfillment of spiritual needs among inpatients at Dr. Hasri Ainun Habibie Regional General Hospital. This study used a quantitative non-experimental design with a Cross-Sectional Study approach. Data were collected through questionnaires involving 86 respondents. Data analysis was conducted using the Chi-Square statistical test to determine the relationship between variables.The results showed that the implementation of spirituality aspects by nurses was mostly categorized as "Very Poor" (59.3%). The fulfillment of patients' spiritual needs was also mostly unmet, with 98.8% of patients feeling that their spiritual needs were inadequate, while only 1.2% felt fulfilled. Statistical analysis showed a significant relationship between the implementation of nurses' spirituality aspects and the fulfillment of spiritual needs among inpatients (p-value = 0.000). There was a significant relationship between the implementation of spirituality aspects by nurses and the fulfillment of patients' spiritual needs. These findings emphasize the importance of improving nurses' spiritual competence through training and guidance to support the quality of holistic nursing care.

Keywords: Implementation of spirituality aspects; fulfillment of spiritual needs.
